(54) Title: DEVICE FOR TRANSCUTANEOUS BIOPSY OF TISSUES

(57) Abstract: Device (1) for taking a sample (25) of biological tissue (22) transcutaneously, comprising: needle means (2) having a tubular-shaped body, having an end associable with a grip and being provided with an edge (6) free at the opposite end (5), lamina means (11) movable between a neutral position wherein it lies near said tubular-shaped body and an operating position wherein it is distanced from the latter, characterized in that said lamina means (11) protrudes towards said end; device (1) for taking a sample (25) from a biological tissue (22) transcutaneously, comprising: needle means (2) having a tubular-shaped body, provided with an end associable with a grip and with a free edge (6) at the opposite end (5), characterized in that said needle means comprises window means (13) shaped in such a way that said sample (25) can be extracted by said device (1) through said window means (13).
